NORTH-WESTERN EUROPEAN LANGUAGE EVOLUTION

Editors:
Michael Barnes (Department of Scandinavian Studies, University College London, Gower Street, G-B-London WC1E 6BT), Rolf H. Bremmer Jr. (Vakgroep Engels, Universiteit Leiden, Postbus 9515, NL-2300 RA Leiden), Gotthard Lerche (Sächsche Akademie der Wissenschaften, Karl-Theodor-Straße 1, D-04107 Leipzig), Hans F. Nielsen (Managing Editor; see inside back cover).

Advisory Editors:
Anders Almqvist (Gälway), Elmer H. Antonson (Urbana), Nils Arhammar (Flensburg), Hans Barbell (Odense), Hans Bekker-Nielsen (Odense), Michael Bensusin (Oslo), Orphée Boyeau (Oslo), Kurt Bruunmüller (Hamburg), Bernard Coirrie (Leipzig), Lars-Eric Eklund (Umeå), Jan Terje Faurrud (Oslo), Erik W. Hansen (Odense; Chairman), Odd Erlin Haugen (Bergen), Jarle Hoekstra (Kiel), Carol F. Justas (Austin), Thomas Klein (Bonn), Gillis Kristensson (Stockholm), Patricia Landinari (Palermo), Anatoly Liberman (Minneapolis), Tom Mackey (Tuscaloosa), Bernard Mees (Melbourne), Wolfgang Meß (Jena; Bruck), Robert Nolda (Wien), Terttu Nevalainen (Helsinki), David Parsons (Nottingham), Matti Rissanen (Helsinki), Peter Schrijver (Münich), Rudolf Schlüter (Minster), Flemming Talin (Odense), Matsui Tajima (Fukuoka), Sheila Watts (Cambridge).

Editorial Policy:
North-Western European Language Evolution (NOWELE) is devoted not only to the study of the early and more recent history of a locally determined group of languages, but also to the study of purely theoretical questions concerning historical language development.
NOWELE welcomes submissions dealing with all aspects of the histories of - and with intra- and extralinguistic factors contributing to change and variation within - Icelandic, Faroese, Norwegian, Swedish, Danish, Frisian, Dutch, German, English, Gothic and the Early Runic language. Accordingly, studies involving past and present neighbouring languages such as Celtic, Finnish, Lithuanian, Russian and French, in so far as these have played and are playing a role in the development or present status of north-western European languages through contact, will be accepted.
NOWELE accepts within the outlined framework analyses based on classical philological principles, studies of a minute detail, be it a historical phenomenon or a theoretical concept, as well as analyses dealing with a larger group of phenomena or with the problems which a theory may present. NOWELE welcomes review articles.

Subscriptions:
NOWELE appears biannually, each issue containing approx. 128 pages. Subscription rates, two issues (one year) D.kr. 280.00, single issues D.kr. 170.00, plus postage and VAT. All subscription orders should be sent to:

Two grammars of Old Norse in non-Nordic languages were published in 1999, Álvarez' *Antigua Islasdes Historia y lengua* (which has not been available to me) and Barnes' *A new introduction to Old Norse. Part I: Grammar*. Robert Nedoma, Vienna, has taken on the task of writing a *new grammar of Old Norse*, in German. This grammar does not aim at enlightening scholars of Old Norse, but is 'als Lehr- und Lernbeispiel für den akademischen Unterricht konzipiert' (back cover). The book must therefore be judged in that context.

*General remarks*

I discovered quickly that the description is traditional in the sense that a chapter on the historical phonology precedes the morphological description. This is the appropriate presentation, since an understanding of the sound changes in the earlier stages of the West Nordic language facilitates the understanding of the morphological system of Old Norse. Although the chapter covering this is short (12 pages), it manages to cover all the essential sound changes.

Also the morphological part of the book follows the traditional description, both in the order of the morphological categories, as well as in the naming of the different declinations and conjugations. This tradition was set by the neogrammarians in the late 19th century, and keeping to this tradition has its definite perks, in that (1) Those students familiar with grammars of other languages do not have to struggle with a different description in addition to a new language, and (2) Those students who want to move on to larger grammars of Old Norse (like Heusler 1932 and especially Noreen 1923) can easily look up forms, knowing where to find them.

After the seven classes of ablaut verbs, there is an ablaut/umlaut list in which the student might find the infinitive to the verbal form he
has found in the text. I am sure that this list will come in very handy for a beginner in Old Norse studies.

In addition to the morphology, the book has a short chapter on syntax, which is only meant as ‘eine Art Wegweiser’ (p. 107), and I think it fulfills this task. The final chapter is a four-page long appendix on Old Norwegian listing its main differences from Old Icelandic.

Throughout the book there are references to special literature for students wanting to dig further into a certain aspect of the language. These references are mainly to recent literature, making them a useful starting point for the student. The book finishes off with a bibliography with the main books for Old Norse studies, and these books are commented on and evaluated. I think this is an excellent bibliography, especially the part covering grammars and dictionaries, and it should prove to be invaluable to the student who wants to move on after the introductory course.

Specific remarks

There are but a few types. An ‘/i/ i.e. ə, is missing in the vowel paradigm on p. 18. The plural of laflod, header, is misspelt haendr (p. 43), and sumar is misspelt sumars on p. 44.

(p. 21) The pronunciation of /g/ of /g/ does not belong to classic Old Icelandic, but is rather a later development in Icelandic. This pronunciation appears when /ɡ/ is followed by a voiceless obstruent, such as n-nom.sg. heilag to heilagar. In Old Icelandic, however, the pronunciation of /ɡz/ is [ɡs], obvious in writings such as land es heilaci (Grimmismal 4.1. Bogge 1937:77).

(p. 21) The claim that -or is ‘innelautend (nur intervokalisich?) zunächst wohl noch labial-verlar (phonemisch [w]) as opposed to the development to [u] elsewhere, is incorrect. The transition [w] > [u] occurs first in intervocalic position, when a form such as the old satar (gen.sg. of sær) is replaced by sáfar. After a consonant other than r and r, however, the pronunciation [w] is upheld throughout Old Icelandic, in forms such as kyttri (dat.sg. of kipt).

(p. 25-26) To exemplify unlaüt, the author uses the noun bögur, correctly reconstructed as *böguz, a u-stem. Its nom.pl., on the other hand, is reconstructed as *böguz. A nom.pl. ending -erz belongs only to the consonant stem. This is a slip in the reconstruction which leads him to construct the plural *böguz to a non-existing Old Norse form bögir. The correct form is a regular u-stem plural bögir.

(p. 27) The reconstruction of the m.nom.sg. n-stem ending -i to Proto-Germanic *-i should be dated by now. Theucerup findings with proper names ending in -i lead to the conclusion that the original ending was *-i, and corresponding with West Germanic. This was later replaced by an analogical ending (from the oblique cases) -a (in several runic findings), and finally by Old Nordic -i. The origin of this -i is, according to Lid (1952:239), the *iun-stem, where the nom.sg. *-i[u] regularly becomes -i.

(p. 33) The forms bitt and batt (to bindiun) do not belong to the subparagr. §11.2, as the neuter forms mitt and echt are a result of an assimilation in unaccented position, whereas bitt and Batt have *nt > tt as the regular development in an older stage of the language. They rather belong to the next subparagraph, §11.3, where they actually reappear in Anm. 15.

(p. 46) The zero grade of the n-suffix in the n-stems did not appear only in the genitive. This is clear from the fact that some old n-stems have become u-stems in Old Norse (such as ørm ‘eagle’ u-st. ørr ‘eag’). The zero grade *-n- appeared before an ending with a syllabic nasal, giving the sequence *-nu-N. This must have occurred in the sec.pl. *ar-n-nz and possibly in the dat.pl. *ar-n-nb.

(p. 50) It should be mentioned here that the neuter adjective ending -ar is lengthened after a vowel, as in the book’s paradigmatic example grær. The phenomenon occurs also in the 2.sg. pret. of the strong verbs, and in this connection it is mentioned on p. 74.

(p. 71) This is the only place where Proto-Indo-European forms are used, *h₁-r₁- and *h₁-r₁-. It would have been better to stick to Proto-Germanic (PG) forms as elsewhere in the book, especially when PG forms are used below in the very same breviary. PG *ér, *er- serve his point equally well.

(p. 81) That the verbs bresta, brugda, shrekpa and sprettu have suffered metathesis of *-r- to *-re- is a personal opinion that does not belong in an introduction, especially when it is unaccounted for.

(p. 81) The claim that sof and sof originally belonged to verb-class V is based on the idea that the roots of class IV must end in a liquid
or nasal. The only difference between class IV and V is the perfect participle form with zero grade in IV, but full grade in V. This split originates in the fact that some roots could appear in the zero grade, whilst others could not (e.g. IV birin < *bir-, V gefän < *geb- < *geb). In this connection it is important to realize that the roots *mut- and *web- could appear in zero grade, as *mut- and *web-. That these verbs are conjugated in class IV in Old Norse might therefore be an archaic feature instead of an innovation.

Amongst the other inaccuracies in the part covering the strong verbs is the claim that the pret.pl. kádú- (to káde) is the regular form (p. 63), but this has rather analogical -od- The regular form is the form mentioned as the side form, kóðú-, with what Nedoms calls 'verstärktem u-Umlaut' (§9.5). Further, sveip is not conjugated as heita (p. 65), since the pret. follows verb class I, that is pret.sg. sveip. And I feel that it must be mentioned that the present tense of hanga follows the weak conjugation (p. 80).

(p. 127) The writing -æ in old East Norwegian manuscripts where classic Old Icelandic has ð is not a sign of lacking u-umlaut, but just another orthographic representation of the vowel /a/ before a following /æ/. That the vowel was mutated is particularly evident from the modern East Norwegian dialects (see Johnson 2003:54, 61 for an elaboration).

(p. 128) Housken (1954:17) says that the vowel harmony in South-East Norwegian dialects is " overnight" (clear), as opposed to Nedoms's claim that South-East Norwegian lacked it.

(p. 129) The claim that Old Norwegian -m- has replaced -fn- through assimilation is only partly correct, since original *-bn- and *-mn- has conserved both in Old Icelandic and Old Norwegian, in the former into -bn-, in the latter into -mn-. In his two examples, jóðan comes from *-bøn-, whilst nufn comes from *-myn-.

I have, however, no reservations against recommending this book for introductory courses in Old Norse. This goes mainly for the German-speaking countries, as in many ways this book is a German version of Iversen's Norsøn grammatikk, which is used in Scandinavia.
